My Chromosome Story

A picture book for children with
a chromosome 15q26 deletion

rarechromo.org

Your body is built from tiny building blocks called **cells**.

Almost all of your cells contain **DNA**, which is full of instructions on how to make you.

The instructions are quite long and complicated and so they are split into different parts called **chromosomes**.

It might help to imagine these instructions are like a big book, and each chromosome is a different chapter.

DNA helps to determine how tall you are, what colour hair you have, and lots of other things about you.

But DNA doesn't determine everything.

Things that happen in your life make a difference as well. If you listen to lots of music you might know more songs. If you don't get enough sleep you might feel tired.

Everyone's DNA is different: some people have extra bits and some people have missing bits.

Inside **your DNA** there is a bit missing, one little piece of DNA has been lost so you have one less copy than most people. It is in the **15th** chapter of your 'instruction book': **chromosome 15**.

Your missing piece of DNA is called a **deletion**.

You also have another copy of **chromosome 15** that has not been changed.

There are lots of other children who have the missing bit of **chromosome 15** like you. They live all over the world.

Just like people without this chromosome change you are all different from each other.

Some people with the missing bit of DNA find some things harder to do than people who are not missing this piece of DNA, but this is different for each person.

Some children with this missing piece of **chromosome 15** have a harder time learning to walk and move around.

Some may need help getting ready for the day or eating food.

And some feel a bit fed up when it's difficult to talk or understand what grown-ups are saying.

It is good to know about the change in your chromosome, because now if you find some things difficult to do, your family, friends, carers and teachers might be able to help you even more than before.

Remember that we are all different in different ways, and we all need help sometimes. It's good that you are exactly the way you are, because your family loves you very much just for being you.
